DETAILED ACTION

Election/Restrictions

1. Applicant's election with traverse of Species One in the reply filed on 7/18/2005 is acknowledged. The traversal is on the ground(s) that examining other species would not be an undue burden. This is not found persuasive because such as the writing of black signal or the detection of motion is indeed different from gray scale conversion or backlight control as disclosed in the elected species.

Still, upon reconsideration, the Examiner agrees that claims 31 and 41 represent a functionally equivalent and obvious alternative to lightening control of a light providing part and would be considered.

Claim 42 is withdrawn from consideration as it is directed to Species Two.

The requirement is still deemed proper and is therefore made FINAL.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter, which the applicant regards as his invention.

3. Claim 44 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

It is unclear as to what the term Dmax define. Correction is required.

Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 5. Claims 29, 39 and 43 are rejected under 35 U.S.C. 103(a) as being unpatentable over Reddy (US 6,175,355 B1) in view of Izawa et al. (EP 525,976 A2).

As for claim 29, Reddy teaches a liquid crystal display method to display an image according to an image signal (figure 3; each pixel frame is divided into sixteen pixel subframes PS0-PS15, corresponding to a four bit binary grayscale image data), comprising

changing a ratio of a display period (all the 'on' subframes) and a non-display period (all the 'off' subframes) of said image according to said image signal (with each gray level according to the image data, inherently the ratio of the display period to the non-display period changes). Please see column 3, line 24 through column 4, line 13.

Reddy does not teach detecting a maximum brightness level of said image signal in 1 frame; and (further) changing the ratio of the display period and the non-display period of said image in a frame period according to said detected maximum brightness level.

Izawa teaches an intensity correction device (fig. 1) for use with display. In particular, Izawa teaches a maximum value detecting circuit 4 for detecting a maximum value of the data of an image signal histogram memory 1. By multiplying a correction

signal corresponding to the luminance level of the input signal and an inverse of the maximum value detected, optimal intensity correction is achieved (see column 3, lines 17-57; and column 4, lines 32-58). By changing signal intensity for display, one of ordinary skill in the art would recognize that the ratio of display period to non-display period is changed accordingly. Moreover, the detection is naturally performed with at least one frame since display is by frame.

As for claim 39, the display above by modified Reddy displays in intensity corrected manner in subframes that reads on claimed changing a gray-scale of said image signal.

As for claim 43, it is inherent that as the maximum brightness level becomes large, the corresponding image signal would also be larger, thus resulting in a larger ratio of the display period and the non-display period.

Allowable Subject Matter

- 6. Claims 30, 31, 40 and 41 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
- 7. Claim 44 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.
- 8. The following is a statement of reasons for the indication of allowable subject matter: none of the prior arts of record teaches, inter alias, the limitations "includes

changing a ratio of a lightening period and a non-lightening period of a light providing part, which lights a liquid crystal panel from a back side thereof' of claims 30 and 40, and "includes changing a transmittance or a no-transmittance of a shutter element provided on a light providing part or on a front side of a liquid crystal panel" of claims 31 and 41.

Response to Arguments

9. Applicant's arguments with respect to claims 29, 30, 31, 39, 40, 41, 43 and 44 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Tom V. Sheng whose telephone number is (571) 272-7684. The examiner can normally be reached on 9:00am - 6:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Amr Awad can be reached on (571) 272-7764. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
